

Web Filtering Service.

MPweb

MPweb is a comprehensive web filtering solution which can replace or enhance a business's existing security infrastructure for improved protection against viruses, spyware, phishing attacks as well as stem inappropriate web use.

MPweb is a cloud-based security solution that proactively prevents communication between your network and web-based threats.

The web filtering solution is used effectively for:

» Internet access control

Businesses who direct their DNS traffic to MPweb can monitor all DNS requests from clients to block responses for sites associated with malware, phishing, and botnets, while allowing requests for safe sites to proceed. When a request for malicious site is made, the response is blocked. Internet access policies are managed at a group level with one policy per site IP.

Millions of URLs are categorised into 10 main categories and 78 subcategories. This database is continuously updated to ensure accurate and advanced control.

» Visibility and management

Administrators can securely access MPweb's powerful rule engine to facilitate user, group and account level access and set policies across email, web and email archive through a single console.

» Real-time forensic reporting

Real-time logs display which sites and downloads business users have attempted to access and whether or not they were permitted. With logs accessible for 90 days, administrators can access the historical information they need to generate key metrics.

Key Features

MPweb secures business networks, ensures businesses meet compliance rules and stay productive.

- 1 Integrated anti-spyware protection**
 - » Featuring award-winning technology from Webroot.
- 2 Web address filtering and file or content type blocking**

 - » through Lightweight Directory Access Protocol (LDAP) integration.
- 6 Detailed real-time and scheduled reporting**
- 7 Support for Citrix & Terminal Services**
- 8 Powered by Webroots Bright Cloud Threat Intelligence**

Key Benefits

- ✓ Keeps networks secure by preventing known and unknown viruses, phishing and malware attacks before they reach the business network.
- ✓ Maintains business productivity by measuring and managing internet abuse, non-work related website use and downloads.
- ✓ Ensures business users meet compliance rules by restricting access to inappropriate, illegal and offensive sites by category and file types.
- ✓ Lowers cost of ownership with no hardware or software purchase or maintenance required.
- ✓ Scalable and reliable service level agreements to ensure uptime.
- ✓ Fault-tolerant Australian and APAC data centres eliminate single point-of-failure risk.
- ✓ DNS-based filtering means all computers using same IP are protected.

Service Options

MPweb is charged per seat on a sliding scale.

We are dedicated to empowering our valued partners.
