

Managed Security Solution.

MPsecure

The comprehensive managed security solution for small to medium businesses to help them build cyber resilience, become Essential Eight compliant and protect against cyberthreats.

MPsecure is a managed security solution which comprehensively protects a business' systems, their people and environment.

MPsecure comprises a cybersecurity assessment, security score and recommended action plan with MPaudit, incident response plan, security portal and regular newsletters with additional phishing simulations and security awareness training and dark web scans.

This program is designed to be delivered by Manage Protect partners who are managed service providers to organisations across Australia and New Zealand.

Benefits for Managed Service Providers (MSPs)

- » Ongoing risk mitigation and prevention of cyber-related disruptions for small to medium businesses who are committed to building and maintaining their cybersecurity resilience with a month-to-month commitment plan,
- » Thorough and multi-faceted approach for MSPs to uncover and address their clients' environmental, technological and human risks,
- » Regular reporting of security status and scores to track improvement, progress and demonstrate value of the MPsecure program, and
- » Flexibility for MSPs to choose the solutions that best address their clients' security risks identified in MPaudit assessment.

Key Features

- » **MPaudit**

MPaudit is centred on the Essential Eight framework and is a methodical, thorough, evidence-based assessment of an organisation's security status and recommended action plan to remediate identified risks.
- » **Incident response plans**

Based on Australian Cyber Security Centre's recommendations and template, the incident response plan details procedures and steps to help a business identify and eliminate threats, and recover from cybersecurity incidents - and ultimately, minimise damage caused by threats.
- » **Monthly security reports and security alerts**

Generated from a connection into Microsoft 365 tenancies will advise policy or configuration changes, provide an up-to-date Microsoft Security Score, tenant configurations compared to Manage Protect best practice, and the ability to remediate common issues in the security portal.*
- » **Security Portal**

The web-based security portal is used to manage and administer security awareness training, phishing simulations and is the central repository for all MPaudit reports, incident response plans, process documentation and dark web scan results.
- » **Dark web scans**

Dark web scans and reports uncover if business details have been shared on the dark web so that risk mitigation measures can be actioned.*
- » **Phishing simulation and security awareness training**

These plans to help staff understand the role they play in security, improve staff awareness and detection of email and web risks.*
- » **Monthly security newsletter**

MPsecure's monthly newsletter shares global threats, insights and issues that businesses around the world are witnessing, and highlights what to be on the lookout for.

*Only available on MPsecure Systems or MPsecure Systems & People plan.

Service Options
